OPEN CALL FOR SUBMISSIONS

ISR is a quarterly, peer-reviewed journal that aims to set contemporary and historical developments in the sciences and technology into their wider social and cultural context and to illuminate their interrelations with the humanities and arts. Originally its concern was primarily with interrelations among the sciences, but for the past many years it has moved steadily toward the study of interdisciplinary exchanges and views among all the disciplines.

Ideally ISR looks for articles which will gain the respect of specialists but which appeal to intelligent non-specialists from across the disciplines. It actively explores the differing trajectories of the disciplines and practices in its purview, to clarify what each is attempting to do in its own terms, so that constructive dialogue across them is strengthened. It focuses whenever possible on conceptual bridge-building and collaborative research that nevertheless respect disciplinary variation. ISR manifests interdisciplinarity rather than discusses the abstract idea.

This is a call for submissions on any topic to an open issue currently scheduled for December 2011, with final materials due in September of that year, first drafts by late Spring. Interested individuals should write to me with a title and abstract of what you might submit.

ISR publishes mostly commissioned rather than open issues, such as the one for which this call is being made. For a list of forthcoming issues, see www.isr-journal.org/forthcoming.html; for past issues, maney.co.uk/index.php/journals/isr/.
